## 1 · What is done

| AREA              | OUTCOME                                                                                                                                                                                       |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Accessibility     | 0 confirmed contrast failures across 22 routes at 1440px and 375px. Dark-surface tokens plus an <code>.on-dark</code> guard so a component moved onto navy cannot silently keep light values. |
| Testing           | Playwright across phone, tablet and desktop. 202 passing. Checks contrast against computed styles, route health, sideways scroll, visible h1, literal markdown, and 44px tap targets.         |
| Performance       | <code>public/</code> cut from 719MB to 83MB. 314MB duplicate reels directory removed, 215MB unreferenced video, videos re-encoded with faststart. Home page 47KB gzipped.                     |
| Content           | All 31 FAQ answers rewritten out of the bold-colon-bullet pattern, 30% shorter. Emoji removed from headings and product chips. Em dashes stripped from body copy.                             |
| Products          | <code>/programmes</code> published: six taught programmes with duration, contact hours, syllabus, assessment, credential and GST-inclusive fee. Refund policy widened to cover them.          |
| University finder | 2,795 to 10,236 institutions across 29 destinations, counted from the file at build time so the headline cannot drift. Course search added under CC-BY.                                       |
| Brand             | Nine implementation decisions applied. Logo sizing, dark set, elevation, seal rules, naming. Documented in <code>BRAND_DECISIONS.md</code> and <code>BUILDING_WITH_THE_SYSTEM.md</code> .     |
| Lenders           | Bajaj reply sent in-thread. Eduvanz opened. Escalation route and certification playbook documented.                                                                                           |

## 2 · Defects found and fixed

| DEFECT                                   | MEASURED EFFECT                                                                      |
|------------------------------------------|--------------------------------------------------------------------------------------|
| Specimen certificate title, navy on navy | <b>1.10:1</b> Invisible on a page shown to lenders. Watermark did not render either. |
| Pay button on <code>/services</code>     | <b>2.14:1</b> Navy on flat blue, on the button that takes money.                     |

|                                          |                                                                                                                                            |
|------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| Guide CTA, hover state only              | <b>2.14:1</b> Passed at rest, failed on hover, which is why nobody saw it.                                                                 |
| Tailwind scanning test artefacts         | <b>500</b> Generated an unparseable class from an RSC payload. Every route returned 500.                                                   |
| <code>/courses</code> in the navbar      | <b>404</b> Linked from the nav, never existed. Its child route 500d on every URL and served invented universities and a fabricated salary. |
| No <code>not-found.jsx</code>            | — Every missing URL fell through to an unstyled black screen.                                                                              |
| External noise texture on 2 pages        | <b>404</b> Third-party asset from a stranger's demo deployment, requested on every load.                                                   |
| Tap targets below 44px                   | <b>18</b> Navbar strip, drawer, footer lists, icon buttons, quantity steppers.                                                             |
| Charter pricing disagreed across 3 pages | <b>₹25,000</b> Advertised figure was below what checkout charges.                                                                          |

**Why these needed a browser.** None was visible by reading the source. Contrast, hover states, overflow and the Tailwind scan bug only exist once a page is rendered and computed styles are available. That is the argument for keeping the Playwright suite in CI.

### 3 · Testimonials, the gap you flagged

You are right. This was not completed, and here is exactly where it stands.

| ITEM                   | POSITION                                                                                                                                                                                                                                                             |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Students on the page   | <b>8 named:</b> Anjali Sangwan, Raghav Verma, Jitesh Jha, Swapnil Arya, Samridhi Singh, Ashmita Bhatt, Monika Nataraj, Sai Krishna Penugonda.                                                                                                                        |
| Why no more were added | Google Drive holds live case files, not marketing material: visa refusal letters, bank statements, private WhatsApp exports, a leads list. Publishing student names, photographs and outcomes from those without per-student consent is not something to do quietly. |
| AgentCis               | No connector exists. The tenant is <code>axelisoverseas.agentcisapp.com</code> and it loads a login form. The 17 Sep ops audit names <b>3 completed cases</b> this cycle: Keertan, Arnab, Divyanshi.                                                                 |
| HubSpot                | 2,521 B2C deals, 5 Closed Won. No Student or Application object exists, so placements were never tracked there.                                                                                                                                                      |
| What unblocks it       | A consent-gated <code>students.json</code> : first name, destination, university, course, year, photograph, for students who said yes. Three names today, more as consent arrives.                                                                                   |

**The honest position.** Those students gave you documents so you could file their visas. Consent to that is not consent to appear on a marketing site. One signed line per student turns this from a risk into an asset, and it is a short task.

### 4 · Open, needing your decision

| ITEM                     | STATUS                      | DETAIL                                                                                                                                |
|--------------------------|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| “5,000+ students placed” | <b>Live, unevidenced</b>    | 6 instances. AgentCis shows 3 completed this cycle, HubSpot 5 Closed Won.                                                             |
| “95% visa approval rate” | <b>Live, unevidenced</b>    | 6 instances. Three completed cases is too small a base to express as a percentage.                                                    |
| “35,000+ universities”   | <b>Live, disproven</b>      | Homepage and navbar. Exceeds WHED's ~21,000 accredited HEIs worldwide. The finder says 10,236.                                        |
| “Guaranteed results”     | <b>In the page title</b>    | Promises an outcome a foreign government decides.                                                                                     |
| Charter pricing          | <b>Aligned, unconfirmed</b> | Everything now matches <code>/products</code> because it is wired to the gateway. Which figure is contractually right is unconfirmed. |
| Product names            | <b>Open</b>                 | The repo has carried five namings. A wrong name on a gateway-wired page is a mis-sold service.                                        |
| Sample certificate       | <b>Does not exist</b>       | The <code>/verify</code> specimen is a layout. No issued artefact exists. Lenders ask for this.                                       |

|                       |      |                                                                                                                          |
|-----------------------|------|--------------------------------------------------------------------------------------------------------------------------|
| Per-hour price spread | 7.5x | ₹347/hr to ₹2,604/hr across the six programmes.<br>Defensible if cohort size explains it, but a credit officer will ask. |
|-----------------------|------|--------------------------------------------------------------------------------------------------------------------------|

## 5 · Still pending on the site

- **Facebook and LinkedIn feeds.** YouTube and Instagram are wired. These two are not.
- **Fresh photography.** One image was replaced. There is no photography direction and stock is unreviewed.
- **The 16px favicon.** Below roughly 24px the rocket and slipstream merge. No simplified mark has been drawn. Do not invent one in code.
- **Course data beyond the Netherlands.** 3,084 Dutch programmes under CC-BY. No other country publishes an openly licensed register.
- **Attendance and completion records.** Needed before any subvented lender arrangement, because clawback is tied to non-completion.
- **Engagement letter.** Design signed off, blocked on counsel for clauses 5 to 7.

## 6 · Known limits of this audit

- **306 contrast cases are unverifiable from the DOM**, not failures. Hero backdrops are absolutely positioned siblings and gradient-clipped text has no resolvable colour. Those need eyes, not a script.
- **3 test failures under parallel load** against a dev server. All pass in isolation. Run `npm run test:ui:prod` against a production build for a clean signal.
- **Deployment weight only.** Git history still carries the removed blobs; the pack is unchanged without a history rewrite.
- **Legacy pages excluded.** `src/legacy_pages/` has no imports and was not audited.

Generated from the live site at 1440px and 375px, plus 202 automated checks across three viewports. Detail in `docs/CLAIMS_SUBSTANTIATION.md`, `docs/brand/BRAND_DECISIONS.md` and `docs/lenders/`.
